TOM WEEKS

Engineering & Analytics Data Professional

tom.weeks15@gmail.com | 07931094282

SUMMARY

Analytics Engineer with 7 years of experience building scalable data products, analytics platforms and revenue-generating solutions across fintech and retail. Combines deep technical expertise with commercial acumen to identify business problems, influence roadmaps and deliver measurable outcomes.

Delivered **£1m+ annualised revenue impact**, reduced pipeline compute costs by **~25% (£175k)**, owned critical data models processing **terabytes of data per week**, automated **2,000+ hours** of operational effort annually, and enabled new **first-party data monetisation streams generating £250,000 annually**.

TECHNICAL SKILLS

- **Data Warehouse:** Snowflake, BigQuery
- **Analytics Engineering:** SQL, dbt, LookML, ELT/Reverse ETL, Dimensional Modelling, Semantic Layer Design, Metric Definitions, Data Marts, Third-party API integration, Fivetran, Hightouch
- **Programming:** Python, JavaScript
- **BI & Reporting:** Looker, Tableau
- **Cloud & Infrastructure:** GCP, AWS
- **Orchestration & DevOps:** Airflow, GitHub, CI/CD
- **Streaming**: Apache Flink

PROFESSIONAL EXPERIENCE

Checkout.com (Fintech Payments) | February 2025 - Present

Global payments platform serving enterprise merchants worldwide.

Analytics Engineer II

- Designed and rolled out an opt-in DML partition-pruning framework for dbt-bigquery resulting in a **~25% reduction** in pipeline cost in our project, equivalent to **£175k** annualised savings. Packaged the framework alongside a Claude plugin for ease of setup and distributed company-wide. Forecasting an additional **£50k of annual savings**.
- Enriched a **250TB / 25bn**-row BigQuery table with **~10TB** of source-of-truth data and kept it up-to-date via a bihourly pipeline, eliminating costly ad-hoc multi-TB joins while **improving data correctness.**
- Technical owner and SME for Checkout.com's Apache Druid vendor partnership, acting as the primary escalation point for incidents; now leading a proof of concept evaluating migration to Google BI Engine to improve reliability and increase engineering velocity.
- Designed and delivered scalable analytics pipelines that increased merchant-facing insight coverage by **5x**, significantly expanding low-latency self-service reporting capabilities for enterprise customers contributing to Checkout.com's Q1 2026 **industry-leading 5/5** Forrester Wave score for "Data, Analytics & Insights".
- Own the pipelines and reliability of multiple production data products serving internal teams and enterprise merchants, including 24/7 on-call escalation for business-critical models.
- Migrated multiple production data products from Snowflake to BigQuery, including alternative payment methods, vault instrument, authentication, merchant-facing analytics datasets, dimensional models, and lower-environment infrastructure. All of which contributed to **~30% cost saving** while maintaining platform performance and reliability.
- Shaped team practices beyond my own delivery: built a Claude plugin for analytics engineering standards, led knowledge-sharing sessions on partition pruning and Imply/Druid, and interviewed AE candidates.

Stenn Technologies (Fintech Start-Up) | April 2024 - December 2024
Global fintech startup. Role concluded following company administration.
Analytics Engineer

- Worked cross-functionally with Marketing and Revenue Operations teams to design and build complex attribution models that enabled Digital Marketing teams to optimise a **$6 million** paid search budget.
- Developed and productionised an early AI marketing product to personalise outbound emails leading to a **35% increase in CTR.**
- Owned Marketing data pipelines, including ELT, reverse ETL, data quality management, and data governance.
- Refactored complex dbt models to adopt best practices and introduced more comprehensive dbt testing.
- Built and maintained Looker Explores/Dashboards and conducted Looker training sessions to the wider business allowing users to self-serve their own analytics.

Ocado Retail Limited (Retail/Media) | April 2021 - April 2024
Built data products, monetisation solutions and analytics systems supporting Ocado's Retail Media business.
Data Analyst > Senior Data Analyst > Data Engineer

- Owned from conception to execution the integration of an ad tech platform's API using Python, JavaScript, and SQL. This facilitated the efficient implementation of media, **saving over 2,000 hours annually** of admin work across the business and removing costly human errors.
- Owned the development of automated personalised communication technology that notifies suppliers whenever their media campaigns require attention. This resulted in a **15% increase in media revenue** and overwhelmingly positive feedback from suppliers.
- Priced media assets that generate **£50 million** in revenue annually, analysed the risk of the new pricing model, and co-presented risk mitigation solutions to senior leadership that shaped the long-term media pricing strategy.
- Standardised the media booking process, trained the buying teams on how to use the new process, and developed document scraping technology that provides robust data for reliable reporting of **£100 million in media revenue**.
- Devised an improved featured product algorithm that resulted in a **10% increase** in ad revenue (approximately **£125,000/year**).
- Led the integration of a demand-side-platform, collaborating cross-functionally to engineer data pipelines that enable the monetisation of first-party data valued at **£250,000 annually.**
- Led a weekly workshop that increased weekly ad revenue by **420%** over a 12-month period (**equating to ~ £1million of incremental revenue** at run rate).
- Established and managed critical data feeds, pivotal to media monetisation strategy.
- Led training sessions for analysts, equipping teams with advanced skills in SQL and process optimisation, fostering a culture of continuous improvement.

Wickes (Retail) | August 2019 - April 2021
Data Analyst

- Delivered analysis that challenged assumptions around loyalty sign-ups, resulting in a **40% increase in scheme adoption.**

EDUCATION

BSc Mathematics and Economics
First-Class Honours
University of Reading

A-Levels:
Economics, Mathematics, and Physics
A*AA
